Section I Introduction

The AX-7 Cobra+

The AX-7 Cobra+ is a protocol converter, which makes it possible to connect a PC type printer to an IBM mainframe environment.

The AX-7 Cobra+ has a coax connector for incoming system data and a printer cable connector for outgoing ASCII data. Power is supplied via the printer's parallel connector or from an optional external power supply.

The picture below shows the front and back panels.

Innovating for a smarter, safer world.

A woman with dark hair and bangs, wearing a black turtleneck sweater, is looking down at a bright green tennis ball she is holding in her right hand. The background is a plain, light-colored wall with a vertical seam.
